Université Libre de Bruxelles

Background: « clinically fit » patients

**PALLIATIVE
TREATMENT**

Background: prognostic factors

	Loss of functional autonomy	Mild Cognitive Impairment	Anemia	Inflammation
<i>Measured</i>	ADL	MMSE	Hemoglobin level	CRP (↑IL-6)
<i>Cut-off score</i>	≤5	<27	<11g/dl	≥2-5 mg/l
<i>Overall survival</i>	✓	✓	✓	✓
<i>Toxicity</i>	✓	✓	✓ ?	✓
<i>Frailty</i>	✓	✓	✓	✓

 Dubruille et al 2015 J Geriatr Oncol

Background: loss of functional autonomy

Loss of functional autonomy		
<i>Measured</i>	ADL	
<i>Cut-off score</i>	≤ 5	
<i>Overall survival</i>	✓	
<i>Toxicity</i>	✓	
<i>Frailty</i>	✓	

Background: mild cognitive impairment

		Mild Cognitive Impairment	
<i>Measured</i>		MMSE	
<i>Cut-off score</i>		<27	
<i>Overall survival</i>		✓	
<i>Toxicity</i>		✓	
<i>Frailty</i>		✓	

Background: mild cognitive impairment

Normal aging

- slight cognitive changes

Mild Cognitive Impairment

- Cognitive change are of concerns to individual
- One or more cognitive domains impaired significantly
- **Preserved** activities of daily living

Dementia

- Cognitive impairment severe enough to **interfere** with everyday abilities

Background: mild cognitive impairment

Dubruille et al 2015 J Geriatr Oncol

Background: biological factors

		Anemia	Inflammation
<i>Measured</i>		Hemoglobin level	CRP(↑IL-6)
<i>Cut-off score</i>		<11g/dl	≥2-5mg/l
<i>Overall survival</i>		✓	✓
<i>Toxicity</i>		✓ ?	✓
<i>Frailty</i>		✓	✓

Background: biological factors

Riva et al 2009 haematologica
Sladoje et al 2014 Dovepress

Methods (1)

- Consecutive inpatients ≥ 65 years
- Suffering from a malignant hemopathie
- Hospitalized for a chemotherapy
- CGA completed
- Biological parameters and deaths were extracted from medical records

Methods (2)

<i>Patients</i>	<i>Additive total score*</i>
Fit	0-1
Vulnerable	2
Frail	3-4

*Based on loss of functional autonomy, MCI, anemia and inflammation

Results (1): characteristics of patients (n=182)

	N	%
Age		
65-74 years	81	44
≥75 years	101	56
Gender		
Men	99	54
Women	83	46
Diagnosis		
Favorable prognosis	151	83
Unfavorable prognosis	31	17
Disease recurrence		
Initial cancer	101	55
Cancer relapse	81	45
Initial treatment choice		
Full dose chemotherapy	104	62
Reduced-dose chemotherapy	64	38
Tolerance to treatment		
No intolerance to treatment	47	72
Intolerance to treatment	121	28

Results (2): clinical and biological vulnerabilities

	Score range	Cut-off score	Vulnerable %
<i>Clinical characteristics</i>			
Functional status (ADL)	0-6	≤5	51%
Instrumental functional status (IADL)	0-8	≤7	67%
Risk of falls status (number of falls)	Number	≥2	12%
Fatigue status (Mob-t)	0-6	<5	71%
Nutritional status (MNA)	0-30	≤23,5	65%
Cognitive status (MMSE)	0-30	<27	28%
Emotional status (GDS-4)	0-4	≥2	56%
Polypharmacy (number of drugs)	Number	≥5	60%
Comorbidities (CCI)	0-30	≥2	45%
<i>Biological characteristics</i>			
Hemoglobin level (Hg)	/	<11g/dl	48%
Sodium (Na)	/	<130 mmol/l	1%
Potassium (K)	/	>5 mmol/l	1%
Albumin (Alb)	/	<3.5 mmol/l	29%
Urea	/	>50 mmol/l	31%
Creatinine	/	>1 mmol/l	34%
Glomerular filtration rate	/	<60 ml/min	38%
Serum C-reactive protein (Crp)	/	≥2mg/l	80%

Results (3): univariate analyses

Kaplan–Meier survival curve for “*clinically fit*” older patients with malignant hemopathies, according to the **ADL** values

Kaplan–Meier survival curve for “*clinically fit*” older patients with malignant hemopathies, according to the **MMSE** values

Results (3): univariate analyses

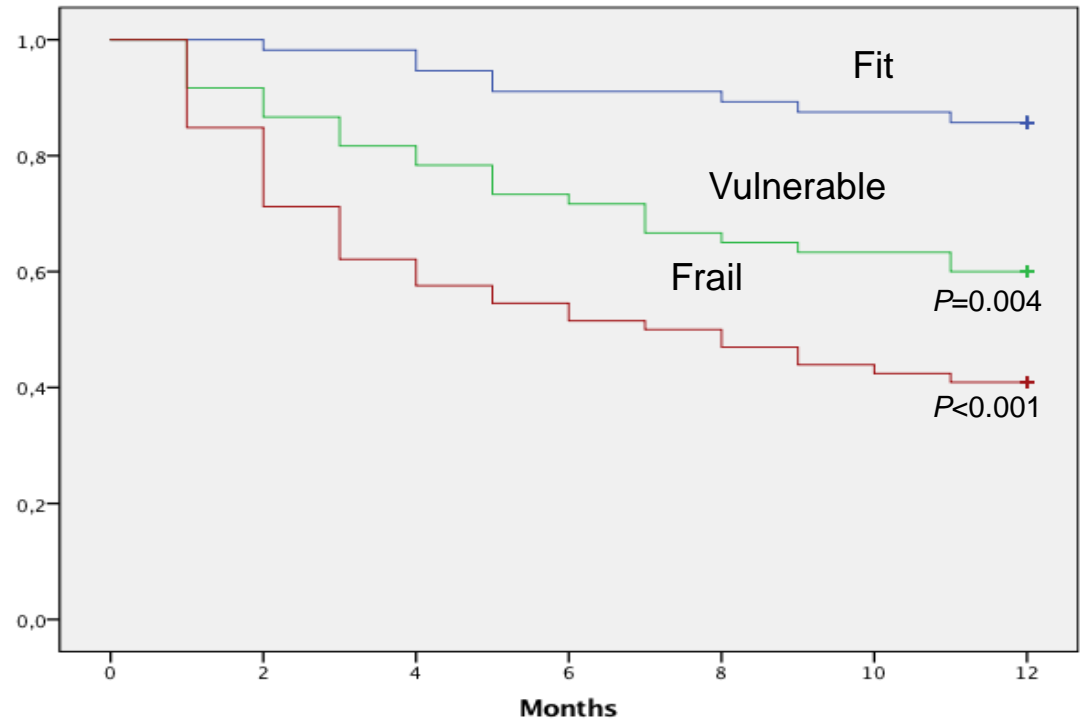

Kaplan–Meier survival curve for “*clinically fit*” older patients with malignant hemopathies, according to the **hemoglobin level**

Kaplan–Meier survival curve for “*clinically fit*” older patients with malignant hemopathies, according to the **CRP level**

Results (4): OS stratified with our frailty score

<i>Patient status</i>	<i>Additive total score</i>	<i>N. of patients (%)</i>	<i>OS %</i>
Fit	0-1	56 (31)	86
Vulnerable	2	60 (33)	60
Frail	3-4	66 (36)	41

Results (5): OS in non-Hodgkin lymphoma and ≥ 80 yrs

Our frailty score among patients with non-Hodgkin lymphoma

Our frailty score among patients aged ≥ 80 years

Results (6): OS stratified with initial treatment choice

Conclusions (1)

Our frailty score:

- Helps clinician
- Detects unsuspected “frail” patients
- Detects very fit older patients aged ≥ 80 yrs

Conclusions (2)

Prospective studies are needed:

- To validate the score in other malignant hemopathies
- To correlate the score with treatment-related toxicity

Acknowledgments
